## zad1

```
[c,l] = wavedec(wiatrak_20, 5, 'db2');
[d5] = detcoef(c,l,[5]);
fid = fopen('wiatrak_20_d5.txt','w+t','n');
fprintf(fid,'%f\n',abs(d5));
fclose(fid);
plot(d5);
```

## zad2

```
[c,l] = wavedec(wiatrak_20, 4, 'coif2');
```

---

```
a4 = appcoef(c,l,'coif2');
fid = fopen('wiatrak_20_a4.txt','w+t','n');
fprintf(fid,'%f\n',abs(a4));
fclose(fid);
plot(a4);
```

## zad3

```
[c,l] = wavedec(wiatrak_20, 8, 'coif2');
a8 = appcoef(c,l,'coif2');
fid = fopen('wiatrak_20_a8.txt','w+t','n');
fprintf(fid,'%f\n',abs(a8));
fclose(fid);
plot(a8);
```

## zad4

```
[c,l] = wavedec(wiatrak_20, 10, 'haar');  
[d10_haar] = detcoef(c,l,[10]);  
fid = fopen('wiatrak_20_d5.txt','w+t','n');  
fprintf(fid,'%f\n',abs(d10_haar));  
fclose(fid);  
plot(d10_haar);
```

## zad5

```
[c,l] = wavedec(wiatrak_20, 10, 'dmey');  
[d10_dmey] = detcoef(c,l,[10]);  
fid = fopen('wiatrak_20_d5.txt', 'w+t', 'n');  
fprintf(fid, '%f\n', abs(d10_dmey));  
fclose(fid);  
plot(d10_dmey);
```

## zad6

```
[c,l] = wavedec(wiatrak_20, 8, 'bior3.5');  
a8_bior = appcoef(c,l,'bior3.5');  
fid = fopen('wiatrak_20_a8.txt','w+t','n');  
fprintf(fid,'%f\n',abs(a8_bior));  
fclose(fid);  
plot(a8_bior);
```

## zad7

```
figure
subplot(2,1,1)
plot(wiatrak_20);
legend('Sygna# przed dekompozycj#')
[c,l] = wavedec(wiatrak_20,12, 'coif2');
